

I wish to express my full support as a licensed radio amateur, for RM-10352. I believe it is essential, especially as the Amateur Service continues to grow around the world, that narrowband and weak-signal modes be protected. Thus I urge that the Commission acts to ensure that the bottom quarter of the 160-meter amateur band is explicitly set aside for narrowband, and put off-limits to SSB, AM, and other relatively wide-band modes. Much of the most important contributions to the advancement of radio art & science by amateurs has been in the area of ever narrower-banded modes. That work benefits everyone by finding ways that a finite amount of spectrum can be used more efficiently. Please enact RM-10352. Thank You.

Respectfully Submitted,

William C. White
